1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 19-28 have been renumbered as claims 39-48.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2,4,6-15 and 39-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lockwood et al (Pat # 4,697,143).

As to claims 1,4,10,13-15,42-45 Lockwood et al disclose a wafer probe having a substrate (33) with a uniform thickness, an electrical conductor (29) on the planar surface of the substrate (33) with one protrusion end ((37) for contacting a semiconductor and a terminal end for connecting to an electrical apparatus (a test equipment). It would have been obvious for one of ordinary skill in the art to consider that the combination of the substrate and the conductor (29) would be qualified as "an interposer" since it serves the same purpose as the interposer in the instant application. As to claims 2,6 and 11-12, the material for the substrate of Lockwood et al is

glass (alumina). As to claims 7,9,39-41,46-48 the material for the substrate (33) such as "Nitride", "nonmetallic Nitride", "Carbide" or "nonmetallic carbide" would have been a well-known material and also an alternative material. As to claim 8, the substrate of Lockwood et al has an insulating layer (31).

4. Applicant's arguments with respect to claims 1-4,6-16 filed on 07/24/2000 have been considered but are moot in view of the new ground(s) of rejection.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
